## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> Albone Peroxide Superoxol	Watery liquid  Colorless  Slightly sharp odor  Sinks and mixes with water. Irritating vapor is produced.
Evacuate. Keep people away. <b>AVOID CONTACT WITH LIQUID AND VAPOR.</b> Wear chemical protective suit including self-contained breathing apparatus. Call fire department. Notify local health and pollution control agencies. Protect water intakes.	
<b>Fire</b>	Not flammable. May cause fire and explode on contact with combustibles and metals. Containers may explode when heated. Wear chemical protective suit including self-contained breathing apparatus. Flood discharge area with water.
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR Irritating to eyes, nose and throat. Harmful if inhaled. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Will burn skin and eyes. Harmful if swallowed. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk.
<b>Water Pollution</b>	Effect of low concentrations on aquatic life is unknown. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

### 3. HEALTH HAZARDS

- 3.1 **Personal Protective Equipment:** Protective garments, both outer and inner, made of a woven polyester fabric or of modacrylic or polyvinylidene fabrics; impermeable apron made of polyvinyl chloride or polyethylene film; neoprene gloves and boots; goggles.
- 3.2 **Symptoms Following Exposure:** Although solutions and vapors are nontoxic, they are irritating. Vapor causes discomfort of eyes and nose. Moderately concentrated liquid causes whitening of the skin and severe stinging sensation. In most cases the stinging subsides quickly and the skin gradually returns to normal without any damage. Highly concentrated liquid can cause blistering of skin if left on for any length of time; can also cause eye damage.
- 3.3 **Treatment of Exposure:** Contact should be avoided, but immediate flushing with water will prevent any reaction in case of accidental contact.

- 3.9 **Chronic Toxicity:** None
- 3.10 **Vapor (Gas) Irritant Characteristics:** Vapors cause moderate irritation, such that personnel will find high concentrations unpleasant. The effect is temporary.
- 3.11 **Liquid or Solid Characteristics:** Fairly severe skin irritant. May cause pain and second-degree burns after a few minutes' contact.

Evacuate. Keep people away. Avoid contact with liquid and vapor. Shut off ignition sources and call fire department. Stay upwind and use water spray to "knock down" vapor. Notify local health and pollution control agencies. Protect water intakes.	
<b>Fire</b>	<b>FLAMMABLE.</b> Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Extinguish with dry chemical, foam or carbon dioxide. Water may be ineffective on fire. Cool exposed containers with water.
<b>Exposure</b>	<b>CALL FOR MEDICAL AID.</b>  <b>VAPOR</b> Not irritating to eyes, nose or throat. If inhaled, will cause coughing or difficult breathing. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  <b>LIQUID</b> Irritating to skin and eyes. If swallowed, will cause nausea or vomiting. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk. <b>DO NOT INDUCE VOMITING.</b>
<b>Water Pollution</b>	Dangerous to aquatic life in high concentrations. Fouling to shoreline. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

<b>Common Synonyms</b> Heptylene	Watery liquid Colorless Gasoline-like odor  Floats on water. Flammable, irritating vapor is produced.
Evacuate. Keep people away. Shut off ignition sources and call fire department. Stay upwind and use water spray to "knock down" vapor. Avoid contact with liquid and vapor. Notify local health and pollution control agencies. Protect water intakes.	
<b>Fire</b>	FLAMMABLE. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Extinguish with dry chemical, foam, or carbon dioxide. Water may be ineffective on fire. Cool exposed containers with water.
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR Irritating to eyes, nose and throat. If inhaled, will cause dizziness or difficult breathing. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Irritating to skin and eyes. Harmful if swallowed. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk. DO NOT INDUCE VOMITING.
<b>Water Pollution</b>	Effect of low concentrations on aquatic life is unknown. Fouling to shoreline. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

# N-HEXANE

HXA

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> Hexane	Watery liquid Colorless Gasoline-like odor  Floats on water. Flammable, irritating vapor is produced.
Evacuate. Keep people away. Avoid contact with liquid and vapor. Shut off ignition sources and call fire department. Stay upwind and use water spray to "knock down" vapor. Notify local health and pollution control agencies. Protect water intakes.	
<b>Fire</b>	FLAMMABLE. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Extinguish with dry chemical, foam, or carbon dioxide. Water may be ineffective on fire. Cool exposed containers with water.
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR Irritating to nose and throat. If inhaled, will cause coughing or dizziness. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Irritating to skin and eyes. If swallowed, will cause nausea or vomiting. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk. DO NOT INDUCE VOMITING.
<b>Water Pollution</b>	Effect of low concentrations on aquatic life is unknown. Fouling to shoreline. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> alpha-Hexene Hexylene	Watery liquid Colorless Mild pleasant odor  Floats on water. Flammable, irritating vapor is produced.
<b>Keep people away.</b> <b>Shut off ignition sources and call fire department.</b> <b>Avoid contact with liquid and vapor.</b> <b>Stay upwind and use water spray to "knock down" vapor.</b> <b>Notify local health and pollution control agencies.</b> <b>Protect water intakes.</b>	
<b>Fire</b>	FLAMMABLE. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Extinguish with dry chemical, foam, or carbon dioxide. Water may be ineffective on fire. Cool exposed containers with water.
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR If inhaled, will cause dizziness, difficult breathing, or loss of consciousness. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Irritating to skin and eyes. Harmful if swallowed. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk. DO NOT INDUCE VOMITING.
<b>Water Pollution</b>	Effect of low concentrations on aquatic life is unknown. Fouling to shoreline. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> para-Hydrogen Liquid hydrogen	Gas Colorless Odorless  Floats and boils on water. Flammable visible vapor cloud is produced.
Evacuate. Keep people away. Avoid contact with liquid and vapor. Shut off ignition sources. Call fire department. Stay upwind. Use water spray to "knock down" vapor.	
<b>Fire</b>	FLAMMABLE. Flame is almost invisible. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Evacuate surrounding area. Stop flow of gas if possible. Cool exposed containers and protect men effecting shutoff with water.
<b>Exposure</b>	VAPOR If inhaled in high concentrations will cause difficult breathing, or loss of consciousness. Move victim to fresh air. If breathing has stopped, give artificial respiration.  LIQUID Will cause frostbite. Flush affected areas with plenty of water. DO NOT RUB AFFECTED AREAS.
<b>Water Pollution</b>	Not harmful to aquatic life.

### 3. HEALTH HAZARDS

- 3.1 **Personal Protective Equipment:** Safety goggles or face shield; insulated gloves and long sleeves; cuffless trousers worn outside boots or over high-top shoes to shed spilled liquid; self-contained breathing apparatus containing air (never use oxygen).
- 3.2 **Symptoms Following Exposure:** If atmosphere does not contain enough oxygen, inhalation can cause dizziness, unconsciousness, or even death. Contact of liquid with eyes or skin causes freezing similar to burn.
- 3.3 **Treatment of Exposure:** The only effect of exposure to liquid hydrogen is that caused by its unusually low temperature and its action as a simple asphyxiant. INHALATION: if victim is unconscious (due to oxygen deficiency), move him to fresh air and apply resuscitation methods; call physician. EYES: treat for frostbite. SKIN: treat for frostbite; soak in lukewarm water; get medical attention if burn is severe.
- 3.4 **TLV-TWA:** Gas is non-poisonous but can act as a simple asphyxiant.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> Acetic acid, isopropyl ester 2-Propyl acetate	Watery liquid	Colorless	Pleasant fruity odor
Floats and mixes slowly with water. Flammable, irritating vapor is produced.			
<b>Keep people away.</b> <b>Shut off ignition sources and call fire department.</b> <b>Stay upwind and use water spray to "knock down" vapor.</b> <b>Avoid contact with liquid and vapor.</b> <b>Notify local health and pollution control agencies.</b> <b>Protect water intakes.</b>			
<b>Fire</b>	FLAMMABLE. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Extinguish with dry chemical, foam, or carbon dioxide. Water may be ineffective on fire. Cool exposed containers with water.		
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR Irritating to eyes, nose and throat. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Irritating to skin and eyes. Harmful if swallowed. Remove contaminated clothing. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk.		
<b>Water Pollution</b>	Effect of low concentrations on aquatic life is unknown. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

# ISOBUTYL ALCOHOL

IAL

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> Fermentation butyl alcohol Isobutanol Isopropylcarbinol 2-Methyl-1-propanol	Oily liquid  Colorless  Mild alcohol, choking odor  Floats and mixes slowly with water. Irritating vapor is produced.
Keep people away. Avoid contact with liquid and vapor. Shut off ignition sources and call fire department. Stay upwind and use water spray to "knock down" vapor. Notify local health and pollution control agencies.	
<b>Fire</b>	FLAMMABLE. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Extinguish with dry chemical, alcohol foam, or carbon dioxide. Water may be ineffective on fire. Cool exposed containers with water.
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR Irritating to eyes, nose and throat. If inhaled, will cause nausea, dizziness, or headache. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Irritating to eyes. Harmful if swallowed. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk.
<b>Water Pollution</b>	Effect of low concentrations on aquatic life is unknown. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

## CAUTIONARY RESPONSE INFORMATION

Common Synonyms	Liquid	Colorless	Almond-like
IBN Isopropyl cyanide 2-Methylpropanenitrile 2-Methylpropionitrile	Floats on water. Flammable vapor is produced.		
<b>Evacuate.</b> <b>KEEP PEOPLE AWAY. AVOID CONTACT WITH LIQUID AND VAPOR.</b> Wear goggles and self-contained breathing apparatus. Shut off ignition sources and call fire department. Stay upwind and use water spray to "knock down" vapor. Notify local health and pollution control agencies.			
Fire	FLAMMABLE. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Wear goggles and self-contained breathing apparatus. Combat fires from safe distance or protected location. Extinguish with dry chemical, alcohol foam, or carbon dioxide. Water may be ineffective on fire. Cool exposed containers with water.		
Exposure	CALL FOR MEDICAL AID.  VAPOR POISONOUS IF INHALED. Irritating to eyes, nose and throat. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID POISONOUS IF SWALLOWED OR IF SKIN IS EXPOSED. Irritating to skin and eyes. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk.		
Water Pollution	Effect of low concentrations on aquatic life is unknown. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> 2-Methylpropane	Liquefied compressed gas    Colorless    Odorless  Floats and boils on water. Flammable visible vapor cloud is produced.
Evacuate. Keep people away. Shut off ignition sources and call fire department. Stay upwind and use water spray to "knock down" vapor. Notify local health and pollution control agencies.	
<b>Fire</b>	FLAMMABLE. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Stop flow of gas if possible. Cool exposed containers and men effecting shutoff with water. Let fire burn.
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR Irritating to eyes. If inhaled, will cause dizziness, difficult breathing or loss of consciousness. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen. IF IN EYES, hold eyelids open and flush with plenty of water.
<b>Water Pollution</b>	Not harmful to aquatic life.

## CAUTIONARY RESPONSE INFORMATION

Common Synonyms 2-Methylpentane		Watery liquid	Gasoline-like odor
		Floats on water. Flammable, irritating vapor is produced.	
Evacuate. Keep people away. Shut off ignition sources and call fire department. Stay upwind and use water spray to "knock down" vapor. Notify local health and pollution control agencies.			
Fire	FLAMMABLE. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Extinguish with dry chemical, foam, or carbon dioxide. Water may be ineffective on fire. Cool exposed containers with water.		
Exposure	CALL FOR MEDICAL AID.  VAPOR Irritating to eyes, nose and throat. If inhaled, will cause dizziness, headache, difficult breathing or loss of consciousness. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Irritating to skin and eyes. If swallowed, will cause nausea or vomiting. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk. DO NOT INDUCE VOMITING.		
Water Pollution	Effect of low concentrations on aquatic life is unknown. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

## **1. INTRODUCTION**

The Chemical Hazards Response Information System (CHRIS) is designed to provide information needed for decision-making by responsible Coast Guard personnel during emergencies that occur during the water transport of hazardous chemicals. CHRIS also provides much information that can be used by the Coast Guard in its efforts to achieve better safety procedures and so prevent accidents.

CHRIS consists of a handbook or manual, a hazard assessment computer system (HACS), and technical support personnel located at Coast Guard headquarters. These components and their relations to one another are described in Section 2 of this manual.

## **2. COMPONENTS OF CHRIS**

### **2.1 HAZARDOUS CHEMICAL DATA**

This manual is the cornerstone of CHRIS. For each substance, it lists the specific chemical, physical, and biological data needed for the preparation and use of the other components of the system. The manual can also be used after the initial response action, when there is sufficient time to use more detailed information.

The Hazardous Chemical Data Manual is intended for use primarily by the On-Scene Coordinator (OSC) and by Regional Response Teams for devising, evaluating, and carrying out response plans.

### **2.2 HAZARD ASSESSMENT COMPUTER SYSTEM**

The Hazard Assessment Computer System (HACS) permits trained specialists to obtain very detailed hazard evaluations quickly, when requested by OSC personnel, and can be accessed through the National Response Center.

### 3. EXPLANATION OF TERMS

This section explains the special terms used in the data sheets, gives the sources of specific items, and includes other information that will be useful to the reader in interpreting the data. The paragraphs below are keyed to the relevant portions by the subheading and number used in the data sheets.

The expression “**Not pertinent**” means that the data item either has no real meaning (such as the flash point of a nonflammable chemical) or is not required for assessing a hazardous situation. The expression “**Currently not available**” means that the information sought was not found in the general or specialized data sources listed in Section 10 of this manual. In a few cases where important data were not available, values were estimated by usually reliable procedures; all such values are labeled “(est.)”. If more accurate values for those items are found, they will be included in later revisions.

The **name** used for each of the chemicals included in the CHRIS manuals is either (1) that specified in the Code of Federal Regulations, Title 46, Part 151 or (2) a common name for those chemicals not now regulated by Sub chapters O and D but known to be hazardous during shipment. The data sheets are arranged in alphabetic order by chemical name, not by the 3-letter code.

The **3-letter code** is designed to facilitate correct identification of chemicals in oral or written communication. The code should be used only *in addition* to the compound name; it should not be used alone. For transmitting the code, use the phonetic alphabet given in the “International Code of Signals.”

#### 1. RESPONSE TO DISCHARGE

In every case of a discharge or leak, it is obvious that an effort should be made to reduce, stop, or contain the flow of material at its source if this can be done safely. The purpose of the terms used in this section is to describe in a general way the cautionary and corrective responses that are described in greater detail in the Response Methods Handbook.

- “*Issue warning*” is used when the chemical is a *poison*, has a *high flammability*, is a *water contaminant*, is an *air* contaminant (so as to be hazardous to life), is an *oxidizing* material, or is *corrosive*.
- “*Restrict access*” is used only for those chemicals that are unusually and immediately hazardous to personnel unless they are protected properly by respirators, protective clothing, etc.
- “*Evacuate area*” is used primarily for unusually poisonous chemicals or those that ignite easily.
- “*Mechanical containment*” is used for water-insoluble chemicals that float and do not evaporate readily.

- “*Should be removed*” is used for chemicals that cannot be allowed to disperse because of their harmful effect on humans or on the ecological system in general. The term is not used unless there is a reasonable chance of preventing dispersal, after a discharge or leak, by chemical and physical treatment.
- “*Chemical and physical treatment*” is recommended for chemicals that can be removed by skimming, pumping, dredging, burning, neutralization, absorption, coagulation, or precipitation. The corrective response may also include the use of dispersing agents, sinking agents, and biological treatment.
- “*Disperse and flush*” is used for chemicals that can be made non-hazardous to humans by simple dilution with water. In a few cases the response is indicated even when the compound reacts with water because, when proper care is taken, dilution is still the most effective way of removing the primary hazard.

## 2. CHEMICAL DESIGNATIONS

**2.1 Coast Guard Compatibility Classification** - An entry is made when the chemical has been assigned to one of the 43 cargo groups listed in Code of Federal Regulations, Title 46, Part 150, “Compatibility of Cargoes.” Appropriate parts of these regulations are included in this manual. Chemicals included in the regulation were assigned to a group by the Cargo and Hazardous Materials Standards Division, Coast Guard Headquarters. If the chemical is not a liquid carried in bulk in ships' tanks, this data item is “Not listed.”

**2.2 Chemical Formula** - This has been limited to a commonly used one-line formula. In the case of some organic compounds it has not been possible to represent chemical structure within such a limitation.

**2.3 IMO/United Nations Numerical Designation** - The designation is that of the “International Maritime Dangerous Goods Code” published by the International Maritime Organization (IMO), London, 1977.

**2.4 Department of Transportation Identification Number** - This is an identification number assigned by the Department of Transportation to aid in categorizing hazards and recommended responses. The ID's can be located in the Hazardous Materials Table, part 172.101 of 49 CFR.

**2.5 Chemical Abstracts Services Registry Number** - The unique identification number assigned each compound registered with the Chemical Abstracts Service (CAS) is listed to aid in quick identification of the compound.

**2.6 NAERG Guide Number** – The number of the guide in the North American Emergency Response Guidebook listing specific emergency response actions for a particular CHRIS chemical. The 1996 edition of the guidebook was used in the preparation of this edition of the CHRIS manual.

**2.7 Standard Industrial Trade Classification** – The five digit code identifying the chemical's commodity category per revision 3 of the subject classification. These codes are compatible with the International Harmonized System codes used in foreign trade.

### 3. HEALTH HAZARDS

**3.1 Personal Protective Equipment** - The items listed are those recommended by (a) manufacturers, either in technical bulletins or in Material Safety Data Sheets, (b) the Chemical Manufacturers Association, or (c) the National Safety Council, for use by personnel while responding to fire or accidental discharge of the chemical. They are intended to protect the lungs, eyes, and skin. Safety showers and eyewash fountains are considered to be important protective equipment for the handling of almost all chemicals; they are not usually listed.

**3.2 Symptoms Following Exposure** - These are brief descriptions of the effects observed in humans when the vapor (gas) is inhaled, when the liquid or solid is ingested (swallowed), and when the liquid or solid comes in contact with the eyes or skin.

**3.3 Treatment for Exposure** - "First-aid" procedures are recommended. They deal with exposure to the vapor (gas), liquid, or solid and include inhalation, ingestion (swallowing) and contact with eyes or skin. The instruction "Do NOT induce vomiting" is given if an unusual hazard is associated with the chemical being sucked into the lungs (aspiration) while the patient is vomiting. "Seek medical attention" or "Call a doctor" is recommended in those cases where only competent medical personnel can treat the injury properly. In all cases of human exposure, seek medical assistance as soon as possible.

**3.4 Threshold Limit Value – Time Weighted Average** -The Threshold Limit Value Time Weighted Average (TLV-TWA) is usually expressed in units of parts per million (ppm) - i.e., the parts of vapor (gas) per million parts of contaminated air by volume at 25°C (77°F) and one atmosphere pressure. For a chemical that forms a fine mist or dust, the concentration is given in milligrams per cubic meter (mg/m<sup>3</sup>). The TLV is defined as the concentration of the substance in air that can be breathed for five consecutive eight-hour workdays (40-hour work week) by most people without adverse effect (American Conference of Governmental Industrial Hygienists, "Threshold Limit Values for Substance in Workroom Air, Adopted by ACGIH"). As some people become ill after exposure to concentrations lower than the TLV, this value cannot be used to define exactly what is a "safe" or "dangerous" concentration.

No entry appears when the chemical is a mixture; it is possible to calculate the TLV for a mixture only when the TLV for each component of the mixture is known and the composition of the mixture by weight is also known.

**3.5 Threshold Limit Value - Short-Term Exposure Limits** - The parts of vapor (gas per million parts of contaminated air by volume at 25°C (77°F) and one atmosphere pressure is given. The limits are given in milligrams per cubic meter

for chemicals that can form a fine mist or dust. The values given are the maximum permissible average exposures for the time periods specified.

**3.6 Threshold Limit Value – Ceiling Value** – The parts of vapor (gas per million parts of contaminated air by volume at 25°C (77°F) and one atmosphere pressure is given. The limits are given in milligrams per cubic meter for chemicals that can form a fine mist or dust. The values given are for a concentration that is not to be exceeded at any time.

**3.7 Toxicity by Ingestion** - The Grade and corresponding LD<sub>50</sub> value are those defined by the National Academy of Sciences, Committee on Hazardous Materials, "Evaluation of the Hazard of Bulk Water Transportation of Industrial Chemicals, A Tentative Guide," Washington, D.C., 1972. Data were also collected from other sources and converted to the appropriate Grade before entry in this manual. The term LD<sub>50</sub> signifies that about 50% of the animals given the specified dose by mouth will die. Thus, for a Grade 4 chemical (below 50 mg/kg) the toxic dose for 50% of animals weighing 70 kg (150 lb) is 70 X 50 = 3500 mg = 3.5 g, or less than 1 teaspoonful; it might be as little as a few drops. For a Grade 1 chemical (5 to 15g/kg), the LD<sub>50</sub> would be between a pint and a quart for a 150-lb man. All LD<sub>50</sub> values have been obtained using small laboratory animals such as rodents, cats, and dogs. The substantial risks taken in using these values for estimating human toxicity are the same as those taken when new drugs are administered to humans for the first time.

**3.8 Toxicity by Inhalation** – Similar to the Toxicity by Ingestion entry, except that the route of exposure is inhalation instead of ingestion. Units and definition of units are the same.

**3.9 Chronic Toxicity** - Where there is evidence that the chemical can cause cancer, mutagenic effects, teratogenic effects, or a delayed injury to vital organs such as the liver or kidney, a qualitative description of the effect is given.

**3.10 Vapor (Gas) Irritant Characteristics** - The most appropriate of five statements listed below is given. Source: National Academy of Sciences, Committee on Hazardous Materials, "Evaluation of the Hazard of Bulk Water Transportation of Industrial Chemicals, A Tentative Guide," Washington, D.C., 1972.)

- (1) Vapors are nonirritating to eyes and throat.
- (2) Vapors cause a slight smarting of the eyes or respiratory system if present in high concentrations. The effect is temporary.
- (3) Vapors cause moderate irritation such that personnel will find high concentrations unpleasant. The effect is temporary.
- (4) Vapors are moderately irritating such that personnel will not usually tolerate moderate or high concentrations.
- (5) Vapors cause severe irritation of eyes and throat and can cause eye and lung injury. They cannot be tolerated even at low concentrations.

**3.11 Liquid or Solid Irritant Characteristics** - The most appropriate of the following five statements is given (same source as 5.8 above):

- (1) No appreciable hazard. Practically harmless to the skin.
- (2) Minimum hazard. If spilled on clothing and allowed to remain, may cause smarting and reddening of skin.
- (3) Causes smarting of the skin and first-degree burns on short exposure; may cause second-degree burns on long exposure.
- (4) Fairly severe skin irritant. May cause pain and second-degree burns after a few minutes' contact.
- (5) Severe skin irritant. Causes second- and third-degree burns on short contact and is very injurious to the eyes.

**3.12 Odor Threshold** - This is the lowest concentration in air that most humans can detect by smell. The value cannot be relied on to prevent over-exposure, because human sensitivity to odors varies over wide limits, some chemicals cannot be smelled at toxic concentrations, odors can be masked by other odors, and some compounds rapidly deaden the sense of smell.

**3.13 IDLH Value** - The Immediately Dangerous to Life and Health Value - This concentration represents a maximum level from which one could escape within 30 minutes without any escape-impairing symptoms or any irreversible health effects. The concentrations are reported in either parts per million (ppm) or milligrams per cubic meter ( $\text{mg}/\text{m}^3$ ).

**3.14 OSHA Permissible Exposure Limit – Time Weighted Average** – Similar to the definition of the TLV-TWA above, except that this limit has been promulgated by the Occupational Safety and Health Agency.

**3.15 OSHA Permissible Exposure Limit – Short Term Exposure Limit** – Similar to the definition of the TVL-STEL above, except that this limit has been promulgated by the Occupational Safety and Health Agency.

**3.16 OSHA Permissible Exposure Limit – Ceiling** – Similar to the definition of the TVL-Ceiling above, except that this limit has been promulgated by the Occupational Safety and Health Agency.

**3.17 EPA AEGL** – Acute Exposure Guideline information from the Environmental Protection Agency for the specific compound listed in the manual.

## 4. FIRE HAZARDS

**4.1 Flash Point** - This is defined as the lowest temperature at which vapors above a volatile combustible substance will ignite in air when exposed to a flame. Depending on the test method used, the values given are either Tag closed cup (C.C.) (ASTM D56) or Cleveland open cup (O.C.) (ASTM D93). The values, along with those in 6.2 and 6.7 below, give an indication of the relative flammability of the chemical. In general, the open cup value is about 10° to 15°F higher than the closed cup value.

**4.2 Flammable Limits in Air** - The percent concentration in air (by volume) is given for the lower (LFL) and upper (UFL) limit. The values, along with those in 6.1 and 6.7, give an indication of the relative flammability of the chemical. The limits are sometimes referred to as “lower explosive limit” (LEL) and “upper explosive limit” (UEL).

**4.3 Fire Extinguishing Agents** - The agents are listed in decreasing order of importance. The general capabilities of all agents are described in section 6, “Fire Protection Handbook,” 18th ed., National Fire Protection Association, Boston, Mass., 1997.

**4.4 Fire Extinguishing Agents Not to be Used** - The agents listed must not be used because they react with the chemical and create an additional hazard. In some cases they are listed because they are ineffective in putting out the fire.

**4.5 Special Hazards of Combustion Products** - Some chemicals decompose or burn to give off toxic and irritating gases. Such gases may also be given off by chemicals that vaporize in the heat of a fire without either decomposing or burning. If no entry appears, the combustion products are thought to be similar to those formed by the burning of oil, gasoline, or alcohol; they include carbon monoxide (poisonous), carbon dioxide, and water vapor. The specific combustion products are usually not well known over the wide variety of conditions existing in fires; some may be hazardous.

**4.6 Behavior in Fire** - Any characteristic behavior that might increase significantly the hazard involved in a fire is described. The formation of dense smoke or flammable vapor clouds, and the possibility of polymerization and explosions is stated. Unusual difficulty in extinguishing the fire is also noted.

**4.7 Ignition Temperature** - This is the minimum temperature at which the material will ignite without a spark or flame being present. Along with the values in 6.1 and 6.2 above, it gives an indication of the relative flammability of the chemical. It is sometimes called the “autoignition temperature.” The method of measurement is given in ASTM D-2155.

**4.8 Electrical Hazard** - The ease with which the chemical is ignited by electrical equipment is indicated by the Group and Class assignment made in the National Fire Protection Association, “Hazardous Chemicals Data,” Boston, Mass., 1994 and in “Classification of Gases, Liquids, and Volatile Solids

Relative to Explosion-Proof Electrical Equipment,” National Academy of Sciences, 1982. This information is available for relatively few chemicals, so an absence of data does not necessarily mean that the substance is not hazardous in the presence of electrical equipment.

**4.9 Burning Rate** - The value is the rate (in millimeters per minute) at which the depth of a pool of liquid decreases as the liquid burns. Details of measurement are given by D.S. Burgess, A. Strasser, and J. Grumer, “Diffusive Burning of Liquid Fuels in Open Trays,” Fire Research Abstracts and Reviews, 3, 177 (1961).

**4.10 Adiabatic Flame Temperature** - The value is the temperature in degrees Fahrenheit of the flame when the material is burned under adiabatic conditions.

**4.11 Stoichiometric Air to Fuel Ratio** - The value is the ratio of air to the compound in question required for stoichiometric combustion. Since it is a ratio, the value is dimensionless.

**4.12 Flame Temperature** - The value is the temperature in degrees Fahrenheit of the flame produced by burning the compound under stoichiometric conditions without any rate controls.

**4.13 Molar Ratio (Reactant to Product)** – The number of moles of products formed, assuming complete combustion of a single mole of the chemical reactant. These ratios were calculated assuming there was sufficient oxygen available and that combustion did, in fact, go to completion.

**4.14 Minimum Oxygen Concentration for Combustion (MOCC)** – Information from NFPA-69 regarding the minimum percentage of oxygen required to support combustion of the subject compound. The results are reported for oxygen diluted with nitrogen (N<sub>2</sub>) and/or carbon dioxide (CO<sub>2</sub>).

## 5. CHEMICAL REACTIVITY

**5.1 Reactivity with Water** - The term “No reaction” means that no hazard results when the chemical reacts or mixes with water. Where a hazard does result, it is described.

**5.2 Reactivity with Common Materials** - This is limited to hazardous reactions with fuels and with common materials of construction such as metal, wood, plastics, cement, and glass. The nature of the hazard, such as severe corrosion or formation of a flammable gas, is described.

**5.3 Stability During Transport** - The term “Stable” means that the chemical will not decompose in a hazardous manner under the conditions of temperature, pressure, and mechanical shock that are normally encountered during shipment; the term does not apply to fire situations. Where there is a possibility of hazardous decomposition, an indication of the conditions and the nature of the hazard is given.

**5.4 Neutralizing Agents for Acids and Caustics** - In all cases involving accidental discharge, dilution with water may be followed by use of the agent specified, particularly if the material cannot be flushed away; the agent specified need not necessarily be used.

**5.5 Polymerization** - A few chemicals can undergo rapid polymerization to form sticky, resinous materials, with the liberation of much heat. The containers may explode. For these chemicals the conditions under which the reaction can occur are given. See Section 12.16 for quantitative data.

**5.6 Inhibitor of Polymerization** - The chemical names and concentrations of inhibitors added by the manufacturer to prevent polymerization are given.

## 6. WATER POLLUTION

**6.1 Aquatic Toxicity** - The form of data presentation used by the Environmental Protection Agency's "Oil and Hazardous Material-Technical Assistance Data System (OHM-TADS)" is used here. Reading from left to right and separated by slashes (/) are the following data:

Concentration in parts per million by weight (or milligrams per liter)  
at which the chemical was tested;  
Time of exposure in hours;  
Name of the aquatic species studied;  
Effect observed;  $LC_{50}$  means that approximately 50% of the fish will die under the conditions of concentrations and time given.  $TL_m$  (Median Tolerance Limit) means that approximately 50% of the fish will show abnormal behavior (including death) under the conditions of concentrations and time given; the term  $EC_{50}$  (Effective Concentration<sub>50</sub>) is used sometimes instead of  $TL_m$ ;  
The kind of water used in the test (fresh or salt)

Some chemicals have been tested with many species of fish. Where the data were available, the data sheet cites one illustrative test in fresh water and one in salt water.

**6.2 Waterfowl Toxicity** - Very little information is available. In a few cases there is entered the  $LD_{50}$  value, which indicates the dose (in milligrams per kilogram of body weight) that is lethal to about half the waterfowl tested.

**6.3 Biological Oxygen Demand (BOD)** - Also called "biochemical oxygen demand," this is a standard way of describing how much oxygen dissolved in water is consumed by biological oxidation of the chemical during the stated period of time. The unit lb/lb indicates the pounds of oxygen consumed by each pound of chemical during the time stated. When given in percent, the values indicate the pounds of oxygen consumed by each 100 pounds of chemical during the time stated. If the percentage is followed by "(theor.)", it indicates the

pounds of oxygen theoretically required to completely oxidize 100 pounds of the chemical.

**6.4 Food Chain Concentration Potential** - If the chemical is consumed by fish, marine plants, waterfowl, etc., that are in turn eaten by other species, the substance may accumulate and ultimately be consumed by humans. Where this occurs, an indication of the potential hazard and its significance is given.

**6.5 GESAMP Hazard Profile** – A composite list of hazard profiles evaluated by the Joint Group of Experts on the Scientific Aspects of Marine Environmental Protection (GESAMP). A summary of the legends used in the profile follows.

Ratings in brackets, ( ), indicate insufficient data available to the GESAMP experts on specific substances, hence extrapolation was required.

N – Not applicable (e.g. if gases)

— Indicates data were not available to the GESAMP Working Group.

## **7. SHIPPING INFORMATION**

**7.1 Grades or Purity** - The grades USP (United States Pharmacopoeia) and CP (chemically pure) are quite pure. Where “Technical” or “Commercial” grades are given, the percent by weight of the pure chemical present is usually indicated. In a few cases the identity of the major impurities is given. If the properties of the less pure grades differ significantly from those of the pure substance, the differences in properties are described in general terms.

**7.2 Storage Temperature** - The range of temperatures at which the chemical is normally shipped in bulk by water transport is given. “Ambient” means the temperature of the surroundings.

**7.3 Inert Atmosphere** - The terms used are “inerted,” “padded,” “ventilated (forced),” “ventilated (natural),” and “no requirement.” They are given when found in the Code of Federal Regulations, Title 46, beginning in Part 151.05.

**7.4 Venting** - The terms used are “open,” “pressure-vacuum,” and “safety relief” (same source as 9.3 above).

**7.5 IMO Pollution Category** – pollution classification applied to this compound by the International Maritime Organization.

**7.6 Ship Type** – The data entry refers to construction and containment requirements for ships being used to transport the chemical in question. The information is taken from the Code of Federal Regulations, Title 46, Part 154.

**7.7 Barge Hull Type** – The data entry refers to structural requirements for barge hulls being used to transport the chemical in question. The information is taken from the Code of Federal Regulations, Title 46, part 151.

## **8. HAZARD CLASSIFICATIONS**

The October 1, 1996 edition was used to prepare this version of the CHRIS. Note that the packaging group is often dependent upon toxicity or flash point of the chemical. In those cases the reported packaging group is based upon the data value reported in CHRIS for that specific compound. The packaging group could be different if the purity of the material varies from that reported in CHRIS.

The classifications are defined in Table 1 below. The symbol used in conjunction with these ratings is illustrated in Section 4.2.

**8.6 EPA Reportable Quantity** – The minimum quantity, in pounds, that must be reported to EPA in the event of a spill. This value is taken from “A List of Hazardous Substances and Reportable Quantities”, Appendix A to Part 172.101, Title 49 of the Code of Federal Regulations.

Oxy		Oxidizing material; any solid or liquid that readily yields oxygen or other oxidizing gas, or that readily reacts to oxidize combustible materials.

## 9. PHYSICAL AND CHEMICAL PROPERTIES

**9.1 Physical State at 15°C and 1 atm** - The statement indicates whether the chemical is a solid, liquid, or gas after it has reached equilibrium with its surroundings at “ordinary” conditions of temperature and pressure.

**9.2 Molecular Weight** - The value given is the weight of a molecule of the chemical relative to a value of 12 for one atom of carbon.

The molecular weight is useful in converting from molecular units to weight units and in calculating the pressure, volume and temperature relationships for gaseous materials. The ratio of the densities of any two gases is approximately equal to the ratio of their molecular weights (see 9.10).

The molecular weights of mixtures can be calculated if both the identity and quantity of each component of the mixture are known. Because the composition of mixtures described in this manual is not known exactly, or because it varies from one shipment to another, no molecular weights are given for such mixtures.

**9.3 Boiling Point at 1 atm** - The value is the temperature of a liquid when its vapor pressure is 1 atm. For example, when water is heated to 100°C (212°F) its vapor pressure rises to 1 atm and the liquid boils.

The boiling point at 1 atm indicates whether a liquid will boil and become a gas at any particular temperature and sea-level atmospheric pressure.

**9.4 Freezing Point** - The freezing point is the temperature at which a liquid changes to a solid. For example, liquid water changes to solid ice at 0°C (32°F). Some liquids solidify very slowly even when cooled below their freezing point. When liquids are not pure (for example, salt water) their freezing points are lowered slightly.

**9.5 Critical Temperature** - The maximum temperature at which a liquid can exist, no matter what the pressure on it, is called the critical temperature. For example, the critical temperature of water is 372°C (705°F). The value can be used to estimate many properties whose values are not immediately available.

**9.6 Critical Pressure** - The vapor pressure of a chemical at the critical temperature (see 9.5) is called the critical pressure. For example, the critical pressure of water is 218 atm. Values are given in pounds per square inch absolute, atmospheres, and meganewtons per square meter. The value can be used for estimating many property values that are not immediately available.

**9.7 Specific Gravity** - The specific gravity of a chemical is the ratio of the weight of the solid or liquid to the weight of an equal volume of water at 4°C (or at some other specified temperature).

If the specific gravity is less than 1.0 (or less than 1.03 in seawater) the chemical will float; if higher, it will sink. Where the change in the value with temperature is important, more data are found in 9.20.

**9.8 Liquid Surface Tension** - This property is a measure of the tensile force at the surface of a liquid that tends to shape liquid fragments into spherical drops. Values are expressed in dynes per centimeter and newtons per meter. Liquids with high surface tensions show less tendency to spread. Water has a surface tension of about 73 dynes/cm; seawater has a slightly higher value.

**9.9 Liquid-Water Interfacial Tension** - The value is a measure of the tensile forces existing at the interface between a liquid and water. Approximately, it is the difference between the individual surface tension of the liquid and that of water. Low values of the interfacial tension indicate that the chemical spreads readily on a water surface. The units are the same as in 9.8.

**9.10 Vapor (Gas) Specific Gravity** - The value is the ratio of the weight of vapor to the weight of an equal volume of dry air at the same conditions of temperature and pressure. Buoyant vapors have a vapor specific gravity less than one. The value may be approximated by the ratio  $M/29$ , where  $M$  is the molecular weight of the chemical (see 9.2).

In some cases the vapor may be at a temperature different from that of the surrounding air. For example, the vapor from a container of boiling methane at  $-172^{\circ}\text{F}$  sinks in warm air, even though the vapor specific gravity of methane at  $60^{\circ}\text{F}$  is about 0.6.

For the effect of temperature on vapor density, see 9.26.

**9.11 Ratio of Specific Heats of Vapor (Gas)** - This property is the ratio of the specific heat at constant pressure ( $C_p$ ) to the specific heat at constant volume ( $C_v$ ); its value is always greater than one. In most cases it was calculated by use of the expression:

$$\frac{C_p}{C_v} = \frac{C_p}{(C_p - R)}$$

where  $R$  is the Universal Gas Constant.

The ratio varies slightly with temperature; the value given is at  $20^{\circ}\text{C}$  ( $68^{\circ}\text{F}$ ). The ratio is often of value in estimating temperature changes when gases are compressed or expanded. Higher values of the ratio lead to larger temperature changes for a given pressure change.

**9.12 Latent Heat of Vaporization** - The value is the heat that must be added to the specified weight of a liquid before it can change to vapor (gas). It varies with temperature; the value given is that at the boiling point at 1 atm (see 9.3). The units used are Btu per pound, calories per gram, and joules per kilogram.

No value is given for chemicals with very high boiling points at 1 atm, because such substances are considered essentially nonvolatile.

**9.13 Heat of Combustion** - The value is the amount of heat liberated when the specified weight is burned in oxygen at 25°C. The products of combustion, including water, are assumed to remain as gases; the value given is usually referred to as the “lower heat value.” The negative sign before the value indicates that heat is given off when the chemical burns. Units are the same as in 9.12.

**9.14 Heat of Decomposition** - The value is the amount of heat liberated when the specified weight decomposes to more stable substances. The value is given for very few chemicals, because most are stable and do not decompose under the conditions of temperature and pressure encountered during shipment. The negative sign before the value simply indicates that heat is given off during the decomposition. The value does not include heat given off when the chemical burns. Units are the same as in 9.12.

**9.15 Heat of Solution** - The value represents the heat liberated when the specified weight of chemical is dissolved in a relatively large amount of water at 25°C (“infinite dilution”). A negative sign before the value indicates that heat is given off, causing a rise in temperature. (A few chemicals absorb heat when they dissolve, causing the temperature to fall.) Units are the same as in 9.12.

In those few cases where the chemical reacts with water and the reaction products dissolve, the heat given off during the reaction is included in the heat of solution.

**9.16 Heat of Polymerization** - The value is the heat liberated when the specified weight of the compound (usually called the monomer) polymerizes to form the polymer. In some cases the heat liberated is so great that the temperature rises significantly, and the material may burst its container or catch fire. The negative sign before the value indicates that heat is given off during the polymerization reaction. Units are the same as in 9.12.

**9.17 Heat of Fusion** - The value is the number of Btu needed to change one pound of solid to liquid with no change in temperature.

**9.18 Limiting Value** - A chemical specific concentration in water in mole fraction units below which the contribution to the evolution of toxic or flammable vapor at the water surface can be assumed to be negligible.

**9.19 Reid Vapor Pressure** - The value is the equilibrium pressure exerted by vapor over the liquid at 100°F., expressed as pounds per square inch absolute, as defined in 46 CFR 30.10-59.

Items 9.20 through 12.27 consist of tables. The temperature is given in one column followed by the appropriate data value in the next column.

**9.20 Saturated Liquid Density** - The value is the weight (in pounds) of one cubic foot of liquid that is in equilibrium with its vapor. Liquid densities decrease slightly with an increase in temperature; where literature data or reliable estimation methods were applicable, a table shows this effect.

**9.21 Liquid Heat Capacity** - The value is the heat (in Btu) required to raise the temperature of one pound of the liquid one degree Fahrenheit at constant pressure. For example, it requires almost 1 Btu to raise the temperature of 1 pound of water from 68°F to 69°F. The value is useful in calculating the increase in temperature of a liquid when it is heated, as in a fire. The value increases slightly with an increase in temperature; the table shows this effect.

**9.22 Liquid Thermal Conductivity** - The value is a measure of the ability of a liquid to conduct heat. It represents the number of Btu per hour that pass through an area of liquid one square foot in cross-section when the temperature gradient is 1°F per inch of depth. Higher values indicate that the liquid conducts heat more readily.

Liquid thermal conductivities decrease slightly with an increase in temperature. Where applicable, the table shows this effect.

A basic law of heat conduction states that the energy flow per unit area per unit time is proportional to the gradient in temperature. The constant of proportionality is the liquid thermal conductivity.

**9.23 Liquid Viscosity** - The value (in centipoise) is a measure of the ability of a liquid to flow through a pipe or hole; higher values indicate that the liquid flows less readily under a fixed pressure head. For example, heavy oils have higher viscosities (i.e., are more viscous) than gasoline.

Liquid viscosities decrease rapidly with an increase in temperature. In some cases a table is given to show the effect. In other cases only a single data point was found in the literature.

A basic law of fluid mechanics states that, for most fluids, the force per unit area needed to shear a fluid is proportional to the velocity gradient. The constant of proportionality is the viscosity.

**9.24 Solubility in Water** - The value represents the pounds of a chemical that will dissolve in 100 pounds of pure water. Solubility usually increases when the temperature increases; where the change has been measured, a table is given to show the effect. The following terms are used when numerical data are either unavailable or not applicable:

The term "Miscible" means that the chemical mixes with water in all proportions. The term "Reacts" means that the substance reacts chemically with water; thus, its solubility has no real meaning. "Insoluble" usually means that very little of the chemical dissolves in 100 pounds of water. (Weak solutions of "Insoluble" materials may still be hazardous to humans, fish, and waterfowl, however.)

**9.25 Saturated Vapor Pressure** - The value is the pressure (in pounds per square inch absolute) of the vapor in equilibrium with the liquid form at the specified temperature. Vapor pressure values can be used to estimate the relative volatility of chemicals at a given temperature, and to calculate the pressure over a liquid that is shipped in a closed container.

The vapor pressure increases as temperature increases; a table is given to show this effect. Note that the vapor pressure scale is logarithmic.

**9.26 Saturated Vapor Density** - The value is the weight (in pounds) of one cubic foot of vapor that is in equilibrium with the liquid form.

If it is assumed that the vapor behaves as an ideal gas, the relation  $pM/RT$  holds, where  $p$  is the vapor pressure,  $M$  is the molecular weight,  $R$  is the gas constant, and  $T$  is the temperature (in absolute units).

Since the vapor pressure varies with temperature (see 9.25), the saturated vapor density also varies with temperature, as shown on the table.

**9.27 Ideal Gas Heat Capacity** - The value is the number of Btu needed to raise the temperature of one pound of gas by 1° Fahrenheit. The property can be used only when the pressure of the gas is less than about 10 atm. The ideal gas heat capacity is not a function of pressure (below about 10 atm), but it does increase with temperature, and a table is given to show the effect.

## **4. OTHER INFORMATION SYSTEMS**

### **4.1 CHEMICAL TRANSPORTATION EMERGENCY CENTER (CHEMTREC)**

The Manufacturing Chemists Association operates CHEMTREC 24 hours a day. By calling the appropriate toll-free number listed below, one can consult experts on chemicals and spill response.

Continental United States, Alaska,	
Hawaii, and Canada .....	800-424-9300
District of Columbia .....	202-483-7616

### **4.2 NATIONAL FIRE PROTECTION ASSOCIATION (NFPA)**

The NFPA's "Recommended System for the Identification of the Fire Hazards of Materials" (NFPA No. 704M) provides basic warning information to fire fighter in industrial plants and storage facilities. This system uses a diamond-shaped warning symbol. The top, left, and right boxes refer to flammability, health, and reactivity hazards respectively and contain a number from 0 to 4. The exact meaning of each number is explained in Section 3 (para 12.3) of this manual, and the applicable number for each chemical are listed in Section 11 under "NFPA Hazard Classifications." The bottom box is used for special hazards; the most common of these is a warning against the use of water, indicated by the symbol W.

### **4.3 INTERNATIONAL MARITIME ORGANIZATION (IMO)**

Foreign vessels using U.S. waterways generally utilize, in addition to U.S. requirements, an international labeling system developed by IMO. This system consists of 15 diamond-shaped labels. Each identifies a particular hazard by a descriptive picture, a word, and a distinctive color.

The number at the bottom of each diamond identifies the class to which IMO has assigned the chemical and is the same as the first digit in the IMO/UN numerical designation, one of the items given under "Chemical Designations" in Section 11 of this manual.

### **4.4 DEPARTMENT OF TRANSPORTATION (DOT)**

The "1996 North American Emergency Response Guidebook" was developed by DOT as a guide for initial actions to be taken when handling incidents involving hazardous materials. The guidebook identifies the most significant potential hazards and gives information and guidance for initial actions to be taken based upon the material involved. Information can be located in the guidebook based upon chemical name or DOT Identification Number.

#### **4.5 OHM-TADS (EPA)**

The Oil and Hazardous Materials Technical Assistance Data System (OHM-TADS) has been developed by the Environmental Protection Agency (EPA) to provide information on physical and chemical properties, hazards, pollution characteristics, and shipping information for over 1200 hazardous materials. OHM-TADS consists of a computerized data base which can be accessed from terminals at the 10 EPA Regional Offices, from EPA Headquarters in Washington, D.C., and from Coast Guard Marine Safety Offices. The System can provide either information on specifically requested properties for a material, or it can print all the information in its files for that material.

Some of the same information appears in both this manual and OHM-TADS, but each contains some information not found in the other.

#### **4.6 POISON CONTROL CENTERS**

Throughout the country, local Poison Control Centers are maintained at hospitals. These Centers can provide information on the chemical composition, appearance, and toxicity of common poisonous materials as well as information on the symptoms of exposure and on the emergency procedures recommended in the event of exposure. The information available at these centers deals mainly with common household materials.

Poison Control Centers are coordinated through the Department of Health and Human Services in Washington, D.C., but information should be requested through the local centers.

The telephone number of the local Poison Control Center can be found in a local telephone directory.

#### **4.7 ASSOCIATION OF AMERICAN RAILROADS (AAR)**

The AAR has developed emergency action guides for 134 various commodities. The guides are contained in a single binder and provide technical information as well as response guidance.

## **6. SELECTED PROPERTIES OF FRESH WATER, SEA WATER, ICE AND AIR**

The following properties are useful for engineering calculations described in the Hazard Assessment Handbook. The values for fresh water are those recorded for pure water. The values for the water of lakes and streams differ somewhat from those of pure water, but since no "standard" fresh water has ever been defined, the values for pure water must be used.

A "standard" sea water has been defined as one containing 35 grams of salts per kilogram of solution. The values for the water of tidal estuaries differ somewhat from those of "standard" sea water because the water has a salinity somewhere between those of fresh and sea waters.

The value for the density of air was derived from the ideal gas law; the air is assumed to be dry and at 1 atmosphere pressure.

## 7. GUIDE TO COMPATIBILITY OF CHEMICALS

The Guide is based in part upon information provided to the Coast Guard by the National Academy of Sciences - U.S. Coast Guard Advisory Committee on Hazardous Materials and represents the latest information available to the Coast Guard on chemical compatibility.

The accidental mixing of one chemical cargo with another can in some cases be expected to result in a vigorous and hazardous chemical reaction. The generation of toxic gases, the heating, overflow, and rupture of cargo tanks, and fire and explosion are possible consequences of such reactions.

The purpose of the Compatibility Chart is to show chemical combinations believed to be dangerously reactive in the case of accidental mixing. It should be recognized, however, that the Chart provides a broad grouping of chemicals with an extensive variety of possible binary combinations. Although one group, generally speaking, can be considered dangerously reactive with another group where an "X" appears on the Chart, there may exist between the groups some combinations which would not dangerously react. The Chart should therefore not be used as an infallible guide. It is offered as an aid in the safe loading of bulk chemical cargoes, with the recommendation that proper safeguards be taken to avoid accidental mixing of binary mixtures for which an "X" appears on the Chart. Proper safeguards would include consideration of such factors as avoidance of the use of common cargo and vent lines and carriage in adjacent tanks having a common bulkhead.

The following procedure explains how the Guide should be used in determining compatibility information:

- (1) Determine the reactivity group of a particular product by referring to the alphabetical list in Table 7.1.
- (1) Enter the Chart with the reactivity group. Proceed across the page. An "X" indicates a reactivity group that forms an unsafe combination with the product in question.

For example, crotonaldehyde is listed in Table 7.1 as belonging in Group 19 (Aldehydes) and also has a notation, (2), which is explained in the footnotes to Table 7.1. The Compatibility Chart shows that chemicals in group 19 should be segregated from sulfuric and nitric acids, caustics, ammonia, and all types of amines (aliphatic, alkanol, and aromatic). Footnote (2), refers the user to Table 7.3 where exceptions to the Compatibility Chart are listed. Here, crotonaldehyde is listed as also being incompatible with Group 1, non-oxidizing acids.

It is recognized that there are wide variations in the reaction rates of individual chemicals within the broad groupings shown reactive by the Compatibility Chart. Some individual materials in one group will react violently with some of the materials in another group and cause great hazard; others will react slowly, or not at all. Accordingly, a useful addition to the Guide would be the identification of specific materials which might not follow the characteristic reactivities of the rest of the materials in its Group. A few such combinations are listed in Table 7.3; as other exceptions to the Chart become known, they will be listed in subsequent revisions of this manual.

## 10. DATA SOURCES

The source of every item of data contained in section 11 is recorded in master data files and is available on request. The principal sources are listed below. Many other sources were consulted, but most of them provided only a few items and are not given here. In a few cases the information given is based on an analogy with that for a closely related chemical; the analogy was drawn by an expert in the field, whose identity appears in the master data files.

Where a source was used for a single category of data, the source is given in Section 3 ("Explanation of Terms") and is not repeated here.

### 10.1 GENERAL SOURCES

The following sources contained data for many of the 13 data categories used:

1. Manufacturers' Technical Bulletins - This is usually the best single source of general information about the chemical. The bulletins contain the most recent data. Bulletins were not available for a few chemicals that are not items of commerce but are intermediates shipped from one manufacturing site to another.
2. Material Safety Data Sheets - These were provided by the manufacturer using the U.S. Department of Labor Form OSHA-20 or an approved modification.
3. Code of Federal Regulations - Office of the Federal Register, Archives and Record Service, Washington, D.C., 1972. Titles 46 (Shipping) and 49 (Transportation) were used in the most recent revision available, October 1, 1996.

### 3. HEALTH HAZARDS

- 3.1 **Personal Protective Equipment:** Self-contained breathing apparatus; butyl rubber gloves and apron; chemical face shield or safety goggles
- 3.2 **Symptoms Following Exposure:** Inhalation causes nose and throat irritation, severe coughing, and chest pain due to irritation of air passages; can cause lung edema and loss of consciousness. Ingestion causes nausea, salivation and severe irritation of mouth and stomach. Contact with eyes causes severe irritation and possible edema of the cornea. Contact with skin causes severe irritation.
- 3.3 **Treatment of Exposure:** INHALATION: remove victim to fresh air; if he is not breathing, give artificial respiration; if breathing is difficult, give oxygen; call a physician. INGESTION: call a physician immediately; encourage the drinking of large quantities of water followed by dilute vinegar, lemon juice, cider, or other weak acids; keep patient warm. EYES: flush with water for 15 min., holding eyelids apart; call physician as soon as possible, preferably an eye specialist. SKIN: flush with water.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> beta-Methylbiviny 2-Methyl-1, 3-butadiene			
Watery liquid	Colorless	Mild odor	
Floats on water. Flammable, irritating vapor is formed. Boiling point is 93°F.			
Evacuate. Keep people away. Shut off ignition sources and call fire department. Stay upwind and use water spray to "knock down" vapor. Avoid contact with liquid and vapor. Notify local health and pollution control agencies.			
<b>Fire</b>	FLAMMABLE. Flashback along vapor trail may occur. Containers may explode in fire. Vapor may explode if ignited in an enclosed area. Wear self-contained breathing apparatus. Combat fires from behind barrier or protected location. Extinguish with dry chemical, foam, or carbon dioxide. Water may be ineffective on fire. Cool exposed containers with water.		
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR Irritating to eyes, nose and throat. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Irritating to skin and eyes. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water.		
<b>Water Pollution</b>	HARMFUL TO AQUATIC LIFE IN VERY LOW CONCENTRATIONS. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

## CAUTIONARY RESPONSE INFORMATION

Common Synonyms	Watery liquid	Colorless	Fuel oil odor
	Floats on water.		
Keep people away. Shut off ignition sources and call fire department. Avoid contact with liquid. Notify local health and pollution control agencies.			
Fire	FLAMMABLE. Extinguish with dry chemical, foam, or carbon dioxide. Water may be ineffective on fire. Cool exposed containers with water.		
Exposure	CALL FOR MEDICAL AID.  LIQUID Irritating to skin and eyes. Harmful if swallowed. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk. DO NOT INDUCE VOMITING.		
Water Pollution	Dangerous to aquatic life in high concentrations. Fouling to shoreline. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

## CAUTIONARY RESPONSE INFORMATION

### Common Synonyms

Watery liquid      Colorless      Fuel oil odor

Floats on water. Irritating, combustible vapor may be produced.

Keep people away. Avoid contact with liquid and vapor.  
Shut off ignition sources and call fire department.  
Stay upwind and use water spray to "knock down" vapor.  
Notify local health and pollution control agencies.

### Fire

Combustible.  
Extinguish with dry chemical, foam, or carbon dioxide.  
Water may be ineffective on fire.  
Cool exposed containers with water.

### Exposure

CALL FOR MEDICAL AID.

#### VAPOR

Irritating to eyes, nose and throat.  
If inhaled, will cause coughing, dizziness, headache, or difficult breathing.  
Move to fresh air.  
If breathing has stopped, give artificial respiration.  
If breathing is difficult, give oxygen.

#### LIQUID

Irritating to skin and eyes.  
Harmful if swallowed.  
Remove contaminated clothing and shoes.  
Flush affected areas with plenty of water.  
IF IN EYES, hold eyelids open and flush with plenty of water.  
IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk.  
DO NOT INDUCE VOMITING.

### Water Pollution

Dangerous to aquatic life in high concentrations.  
Fouling to shoreline.  
May be dangerous if it enters water intakes.  
Notify local health and wildlife officials.  
Notify operators of nearby water intakes.

### 3. HEALTH HAZARDS

- 3.1 **Personal Protective Equipment:** Dust mask and protective gloves  
3.2 **Symptoms Following Exposure:** Early symptoms of lead intoxication via inhalation or ingestion are most commonly gastrointestinal disorders, colic, constipation, etc.; weakness, which may go on to paralysis, chiefly of the extensor muscles of the wrists and less often of the ankles, is noticeable in the most serious cases. Ingestion of a large amount causes local irritation of the alimentary tract; pain, leg cramps, muscle weakness, paresthesias, depression, coma, and death may follow in 1 or 2 days. Contact with eyes causes irritation.  
3.3 **Treatment of Exposure:** Remove at once all cases of lead intoxication from further exposure until the blood level is reduced to a safe value; immediately place the individual under medical care.  
INGESTION: give gastric lavage using 1% solution of sodium or magnesium sulfate; leave 15-30 gm magnesium sulfate in 6-8 oz. of water in the stomach as antidote and cathartic; egg white, milk, and tannin are useful demulcents; atropine sulfate and other antispasmodics may relieve abdominal pain, but morphine may be necessary. EYES or SKIN: flush with water.

### 3. HEALTH HAZARDS

- 3.1 **Personal Protective Equipment:** Rubber gloves; face shield; rubber apron  
3.2 **Symptoms Following Exposure:** Early symptoms of lead intoxication via inhalation or ingestion are most commonly gastrointestinal disorders, colic, constipation, etc.; weakness, which may go on to paralysis, chiefly of the extensor muscles of the wrists and less often of the ankles, is noticeable in the most serious cases. Ingestion of a large amount causes local irritation of the alimentary tract; pain, leg cramps, muscle weakness, paresthesias, depression, coma, and death may follow in 1 or 2 days. Contact with eyes or skin may cause burns and/or irritation.  
3.3 **Treatment of Exposure:** Remove at once all cases of lead intoxication from further exposure until the blood level is reduced to a safe value; immediately place the individual under medical care.  
INGESTION: give gastric lavage using 1% solution of sodium or magnesium sulfate; leave 15-30 gm magnesium sulfate in 8-9 oz. of water in the stomach as antidote and cathartic; egg white, milk, and tannin are useful demulcents; atropine sulfate and other antispasmodics may relieve abdominal pain, but morphine may be necessary. EYES: flush with copious quantities of water for 15 min. SKIN: wash area with soap and water; treat as an acid burn.

**KEEP PEOPLE AWAY. AVOID CONTACT WITH SOLID AND DUST.**  
Wear dust respirator.  
Notify local health and pollution control agencies.

### Fire

Not flammable.

### Exposure

CALL FOR MEDICAL AID.  
DUST  
POISONOUS IF INHALED.  
If inhaled will cause dizziness or loss of consciousness.  
If in eyes, hold eyelids open and flush with plenty of water.  
If breathing has stopped, give artificial respiration.  
If breathing is difficult, give oxygen.

SOLID  
Irritating to skin and eyes.  
If swallowed will cause nausea, vomiting or loss of consciousness.  
Remove contaminated clothing and shoes.  
Flush affected areas with plenty of water.  
IF IN EYES, hold eyelids open and flush with plenty of water.  
IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk and have victim induce vomiting.  
IF SWALLOWED and victim is UNCONSCIOUS OR HAVING CONVULSIONS, do nothing except keep victim warm.

### 3. HEALTH HAZARDS

- 3.1 **Personal Protective Equipment:** Dust mask and protective gloves.
- 3.2 **Symptoms Following Exposure:** Early symptoms of lead intoxication via inhalation or ingestion are most commonly gastrointestinal disorders, colic, constipation, etc.; weakness, which may go on to paralysis, chiefly of the extensor muscles of the wrists and less often the ankles, is noticeable in the most serious cases. Ingestion of a large amount causes local irritation of the alimentary tract. Pain, leg cramps, muscle weakness, paresthesias, depression, coma, and death may follow in 1 or 2 days. Contact with eyes causes irritation.
- 3.3 **Treatment of Exposure:** Remove at once all cases of lead intoxication from further exposure until the blood level is reduced to a safe value; immediately place the individual under medical care.  
INGESTION: give gastric lavage using 1% solution of sodium or magnesium sulfate; leave 15-30 mg magnesium sulfate in 6-8 oz. of water in the stomach as antidote and cathartic; egg white, milk, and tannin are useful demulcents; atropine sulfate and other antispasmodics may relieve abdominal pain, but morphine may be necessary. EYES or SKIN: flush with water.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> LNG	Gas Colorless Odorless or weak skunk odor  Floats and boils on water. Flammable visible vapor cloud is produced.
<b>Keep people away.</b> <b>Shut off ignition sources and call fire department.</b> <b>Stay upwind and use water spray to "knock down" vapor.</b> <b>Evacuate area in case of large discharge.</b> <b>Avoid contact with liquid.</b> <b>Notify local health and pollution control agencies.</b>	
<b>Fire</b>	FLAMMABLE. Flashback along vapor trail may occur. May explode if ignited in an enclosed area. Stop discharge if possible. Cool exposed area and men effecting shutoff with water. Let fire burn.
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR Not irritating to eyes, nose or throat. If inhaled, will cause dizziness, difficult breathing, or loss of consciousness. Move to fresh air. ### 3. HEALTH HAZARDS

- 3.1 **Personal Protective Equipment:** Dust mask and protective gloves  
3.2 **Symptoms Following Exposure:** Early symptoms of lead intoxication via inhalation or ingestion are most commonly gastrointestinal disorders, colic, constipation, etc.; weakness, which may go on to paralysis, chiefly of the extensor muscles of the wrists and less often the ankles, is noticeable in the most serious cases. Ingestion of a large amount causes local irritation of the alimentary tract; pain, leg cramps, muscle weakness, paresthesias, depression, coma, and death may follow in 1 or 2 days. Contact with eyes causes irritation.  
3.3 **Treatment of Exposure:** Remove at once all cases of lead intoxication from further exposure until the blood level is reduced to a safe value; immediately place the individual under medical care.  
INGESTION: give gastric lavage using 1% solution of sodium or magnesium sulfate; leave 15-30 gm magnesium sulfate in 6-8 oz. of water in the stomach as antidote and cathartic; egg white, milk, and tannin are useful demulcents; atropine sulfate and other antispasmodics may relieve abdominal pain, but morphine may be necessary. EYES or SKIN: flush with water.

### 3. HEALTH HAZARDS

- 3.1 **Personal Protective Equipment:** Respirator when mist is present; rubber or vinyl gloves; chemical goggles; rubber shoes and apron.
- 3.2 **Symptoms Following Exposure:** Liquid is irritating to skin, eyes, and mucous membranes. Ingestion may cause nausea. Repeated skin exposure can cause dermatitis and may produce a sensitizing effect.
- 3.3 **Treatment of Exposure:** Get medical attention for all eye exposures and any other serious over-exposures. INHALATION (mist): rinse mouth repeatedly with cold water; treatment is symptomatic. INGESTION: dilute by drinking water; if vomiting occurs, drink more water; administer saline laxative. EYES: flush thoroughly with water; ventilation by electric fan is helpful in removing last traces, especially around eyes and eyelids. SKIN: remove contaminated clothing; flush skin with water; wash exposed area with soap and water.

Keep people away. AVOID CONTACT WITH POWDER OR DUST. Wear goggles, self-contained breathing apparatus, rubber overclothing (including gloves). Notify local health and pollution control agencies.	
<b>Fire</b>	Not flammable. Poisonous and irritating gases produced when heated. Wear goggles and self-contained breathing apparatus.
<b>Exposure</b>	CALL FOR MEDICAL AID. DUST. POISONOUS IF INHALED. Irritating to skin and eyes. Move to fresh air. IF IN EYES, hold eyelids open and flush with plenty of water. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  SOLID. POISONOUS IF SWALLOWED. Flush affected areas with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk and have victim induce vomiting. IF SWALLOWED and victim is UNCONSCIOUS or having CONVULSIONS, do nothing except keep victim warm.

### 3. HEALTH HAZARDS

- 3.1 **Personal Protective Equipment:** Dust mask; goggles or face shield; rubber gloves  
3.2 **Symptoms Following Exposure:** Early symptoms of lead intoxication via inhalation or ingestion are most commonly gastrointestinal disorders, colic, constipation, etc.; weakness, which may go on to paralysis, chiefly of the extensor muscles of the wrists and less often of the ankles, is noticeable in the most serious cases. Ingestion of a large amount causes local irritation of the alimentary tract; pain, leg cramps, muscle weakness, paresthesias, depression, coma, and death may follow in 1 or 2 days. Contact causes irritation of eyes and mild irritation of skin.  
3.3 **Treatment of Exposure:** Remove at once all cases of lead intoxication from further exposure until the blood level is reduced to a safe value; immediately place the individual under medical care.  
INGESTION: give gastric lavage using 1% solution of sodium or magnesium sulfate; leave 15-30 gm magnesium sulfate in 6-8 oz. of water in the stomach as antidote and cathartic; egg white, milk, and tannin are useful demulcents; atropine sulfate and other antispasmodics may relieve abdominal pain, but morphine may be necessary. EYES: flush with water for at least 15 min.  
SKIN: wash well with soap and water.

## CAUTIONARY RESPONSE INFORMATION

### Common Synonyms

Soft solid White to light silver Odorless

Evacuate.  
**KEEP PEOPLE AWAY. AVOID CONTACT WITH SOLID.**  
Wear rubber overclothing (including gloves).  
Shut off ignition sources and call fire department.  
Notify local health and pollution control agencies.

### Fire

Combustible.  
Irritating gases may be produced when heated.  
Wear goggles and self-contained breathing apparatus.  
Extinguish with dry graphite, soda ash, or other inert powder.  
**DO NOT USE WATER, FOAM, DRY CHEMICALS OR CARBON DIOXIDE ON FIRE.**  
**DO NOT USE WATER OR FOAM ON ADJACENT FIRES.**

### Exposure

CALL FOR MEDICAL AID.  
**SOLID**  
Will burn skin and eyes.  
Harmful if swallowed.  
Remove contaminated clothing and shoes.  
Flush affected areas with plenty of water.  
IF IN EYES, hold eyelids open and flush with plenty of water.  
IF SWALLOWED and victim is UNCONSCIOUS, have victim drink water or milk.  
IF SWALLOWED and victim is UNCONSCIOUS OR HAVING CONVULSIONS, do nothing except keep victim warm.

### Water Pollution

Effect of low concentrations on aquatic life is unknown.  
May be dangerous if it enters water intakes.  
Notify local health and wildlife officials.  
Notify operators of nearby water intakes.

## 3. HEALTH HAZARDS

- 3.1 **Personal Protective Equipment:** Rubber or plastic gloves; face shield; respirator; fire-retardant clothing  
3.2 **Symptoms Following Exposure:** Contact with eyes causes caustic irritation or burn. Incontact with skin lithium reacts with body moisture to cause chemical burns: foil, ribbon, and wire react relatively slowly.

### 3. HEALTH HAZARDS

- 3.1 **Personal Protective Equipment:** Goggles or face shield; rubber gloves
- 3.2 **Symptoms Following Exposure:** Early symptoms of lead intoxication by ingestion are most commonly gastrointestinal disorders, colic, constipation, etc.; weakness, which may go on to paralysis chiefly of the extensor muscles of the wrists and less often of the ankles, is noticeable in the most serious cases. Ingestion of a large amount causes local irritation of the alimentary tract; pain, leg cramps, muscle weakness, paresthesias, depression, coma, and death may follow in 1 or 2 days. Contact causes severe irritation of eyes and can burn skin.
- 3.3 **Treatment of Exposure:** Remove at once all cases of lead intoxication from further exposure until the blood level is reduced to a safe value; immediately place the individual under medical care.  
INGESTION: give gastric lavage using 1% solution of sodium or magnesium sulfate; leave 15-30 gm magnesium sulfate in 6-8 oz. of water in the stomach as antidote and cathartic; egg white, milk, and tannin are useful demulcents; atropine sulfate and other antispasmodics may relieve abdominal pain, but morphine may be necessary. EYES: flush with water for at least 15 min.  
SKIN: wash contaminated skin with large amounts of water for 15 min.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> Allene-methylacetylene mixture MAPP gas Methylacetylene-allene mixture Propadiene-methylacetylene mixture	Gas	Colorless	Garlic-like odor
Floats and boils on water. Flammable visible vapor cloud is produced.			
Keep people away. Avoid contact with liquid. Shut off ignition sources. Call fire department. Evacuate area in case of large discharge. Notify local health and pollution control agencies.			
<b>Fire</b>	FLAMMABLE. Containers may explode in fire. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Let fire burn. Stop flow of gas if possible. Cool exposed containers and protect men effecting shutoff with water.		
<b>Exposure</b>	Call for medical aid.  VAPOR If inhaled will cause difficult breathing. Move victim to fresh air. If breathing is difficult, give oxygen.  LIQUID Will cause frostbite. Flush affected areas with plenty of water. DO NOT RUB AFFECTED AREAS.		
<b>Water Pollution</b>	Not harmful to aquatic life.

<b>Common Synonyms</b>	Solid  White  Mild vinegar-like odor  Sinks and mixes with water.
<b>KEEP PEOPLE AWAY. AVOID CONTACT WITH SOLID AND DUST. Wear goggles and dust respirator. Stay upwind. Use water sprat to "knock down" dust. Notify local health and pollution control agencies.</b>	
<b>Fire</b>	Not flammable. POISONOUS GASES MAY BE PRODUCED WHEN HEATED.
<b>Exposure</b>	CALL FOR MEDICAL AID. DUST POISONOUS IF INHALED. Move victim to fresh air. If in eyes, hold eyelids open and flush with plenty of water. If breathing is difficult, give oxygen.  SOLID POISONOUS IF SWALLOWED. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk and have victim induce vomiting. IF SWALLOWED and victim is UNCONSCIOUS OR HAVING CONVULSIONS, do nothing except keep victim warm.
<b>Water Pollution</b>	HARMFUL TO AQUATIC LIFE IN VERY LOW CONCENTRATIONS. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> n-Butyl methyl ketone 2-Hexanone	Liquid  Clear  Disagreeable Odor  Floats and mixes with water.
Keep people away. Avoid contact with liquid and vapor. Shut off ignition sources. Call fire department. Stay upwind. Use water spray to "knock down" vapor. Notify local health and pollution control agencies.	
<b>Fire</b>	FLAMMABLE. Containers may explode in fire. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Extinguish with dry chemicals, alcohol foam, or carbon dioxide. Water may be ineffective on fire. Cool exposed containers with water.
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR Irritating to eyes, nose and throat. Harmful if inhaled. If in eyes, hold eyelids open and flush with plenty of water. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Irritating to skin and eyes. Harmful if swallowed. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water of milk and have victim induce vomiting. IF SWALLOWED and victim is UNCONSCIOUS OR HAVING CONVULSIONS, do nothing except keep victim warm.
<b>Water Pollution</b>	Effect of low concentrations on aquatic life is unknown. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> gamma-Chloroisobutylene 3-Chloro-2-methylpropene beta-Methylalyl chloride beta-Methylalyl chloride	Liquid  Colorless to yellow  Sharp penetrating odor  Floats on water. Flammable, irritating vapor is produced.
<b>Evacuate.</b> <b>Keep people away.</b> <b>Shut off ignition sources, call fire department.</b> <b>Stay upwind, use water spray to "knock down" vapor.</b> <b>Notify local health and pollution control agencies.</b>	
<b>Fire</b>	FLAMMABLE. Irritating gases may be produced when heated. Containers may explode in fire. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Extinguish with dry chemicals, foam or carbon dioxide. Water may be ineffective on fire. Cool exposed containers with water.
<b>Exposure</b>	Call for medical aid.  VAPOR Harmful if inhaled. Move victim to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Irritating to skin and eyes. Harmful if swallowed. Remove Contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk and have victim induce vomiting. IF SWALLOWED and victim is UNCONSCIOUS OR HAVING CONVULSIONS, do nothing except keep victim warm.
<b>Water Pollution</b>	Effect of low concentrations on aquatic life is unknown. Fouling to shoreline. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> Cianurina Mercury cyanide Mercury (II) cyanide	Solid (crystals or powder)      White  Sinks and mixes slowly with water.
<b>KEEP PEOPLE AWAY. AVOID CONTACT WITH SOLID AND DUST.</b> Wear a dust respirator and rubber overclothing (including gloves). Notify local health and pollution control agencies.	
<b>Fire</b>	Not flammable. POISONOUS GASES MAY BE PRODUCED WHEN HEATED.
<b>Exposure</b>	CALL FOR MEDICAL AID. DUST POISONOUS IF INHALED OR IF SKIN IS EXPOSED. If inhaled will cause coughing or difficult breathing. If in eyes, hold eyelids open and flush with plenty of water. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  SOLID POISONOUS IF SWALLOWED OR IF SKIN IS EXPOSED. Irritating to skin and eyes. If swallowed will cause nausea and vomiting. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk and have victim induce vomiting. IF SWALLOWED and victim is UNCONSCIOUS OR HAVING CONVULSIONS, do nothing except keep victim warm.
<b>Water Pollution</b>	HARMFUL TO AQUATIC LIFE IN VERY LOW CONCENTRATIONS. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

<b>1. CORRECTIVE RESPONSE ACTIONS</b> Stop discharge	<b>2. CHEMICAL DESIGNATIONS</b> 2.1 CG Compatibility Group: Not listed. 2.2 Formula: Hg(CN) <sub>2</sub> 2.3 IMO/UN Designation: 6.1/1636 2.4 DOT ID No.: 1636 2.5 CAS Registry No.: 592-04-1 2.6 NAERG Guide No.: 154 2.7 Standard Industrial Trade Classification: 52381
<b>3. HEALTH HAZARDS</b> 3.1 <b>Personal Protective Equipment:</b> Dust mask; goggles or face shield; rubber gloves 3.2 <b>Symptoms Following Exposure:</b> Symptoms of both cyanide and mercury intoxication can occur. Acute poisoning has resulted from inhaling dust concentrations of 1.2-8.5 mg/m <sup>3</sup> of air; symptoms include tightness and pain in chest, coughing, and difficulty in breathing; cyanide poisoning can cause anxiety, confusion, dizziness, and shortness of breath, with possible unconsciousness, convulsions, and paralysis; breath may smell like bitter almonds. Ingestion causes necrosis, pain, vomiting, and severe purging, plus the above symptoms. Contact with eyes causes ulceration of conjunctiva and cornea. Contact with skin causes irritation and possible dermatitis; systemic poisoning can occur by absorption through skin. 3.3 <b>Treatment of Exposure:</b> Act quickly; call physician. INHALATION: if victim has stopped breathing, start artificial respiration immediately; using amyl nitrite pearls, administer amyl nitrite by inhalation for 15-30 seconds of every minute while sodium nitrite solution is being prepared; discontinue amyl nitrite and immediately inject intravenously 10 ml of a 3% solution of sodium nitrite (nonsterile if necessary) over a period of 2-4 min.; without removing needle, infuse intravenously 50 ml of a 25% aqueous solution of sodium thiosulfate; injection should take about 10 min. (concentrations of 5-50% may be used, but keep total dose approx. 12 gm). Oxygen therapy may be helpful in combination with the above. <b>Common Synonyms</b>	Liquid  Colorless  Sharp irritating odor  Reacts violently with water. Irritating gas is produced on contact with water.
Evacuate. KEEP PEOPLE AWAY. AVOID CONTACT WITH LIQUID AND VAPOR. Wear goggles and self-contained breathing apparatus. Shut off ignition sources. Call fire department. Notify local health and pollution control agencies.	
<b>Fire</b>	FLAMMABLE. POISONOUS GASES MAY BE PRODUCED IN FIRE. Containers may explode in fire. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Extinguish with dry chemicals or carbon dioxide. DO NOT USE WATER OR FOAM ON FIRE. DO NOT USE WATER OR FOAM ON ADJACENT FIRES.
<b>Exposure</b>	Call for medical aid.  VAPOR Irritating to eyes, nose and throat. If inhaled will cause difficult breathing. Move victim to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Will burn skin and eyes. Harmful if swallowed. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk. DO NOT INDUCE VOMITING.
<b>Water Pollution</b>	Effect of low concentrations on aquatic life is unknown. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> Dichloroacetic acid, methyl ester Methyl dichloroethanoate	Liquid  Colorless  Ethereal odor  Sinks in water.
<b>KEEP PEOPLE AWAY. AVOID CONTACT WITH LIQUID AND VAPOR.</b> Wear self-contained breathing apparatus and full protective clothing. Call fire department. Notify local health and pollution control agencies.	
<b>Fire</b>	Combustible. Toxic fumes emitted when heated. Wear self-contained breathing apparatus and full protective clothing. Extinguish with CO <sub>2</sub> , dry chemical, or foam.
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR Harmful if inhaled or absorbed through the skin. Highly irritating to skin, eyes, and mucous membranes. Hydrolyzes upon contact with moisture to form vapors corrosive to tissue. Remove victim to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Harmful if swallowed or absorbed through the skin. Corrosive to eyes, skin, nose, throat, and upper respiratory tract. Hydrolyzes upon contact with moisture to form vapors corrosive to skin. IF IN EYES: hold eyelids open, flush with plenty of water for at least 15 minutes. Remove contaminated clothing and shoes; flush affected areas with water. IF SWALLOWED: do nothing except keep victim warm. DO NOT INDUCE VOMITING.
<b>Water Pollution</b>	Effects of low concentrations on aquatic life are not known. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> 2-Butanone Ethyl methyl ketone MEK	Liquid  Colorless  Sweet odor  Floats and mixes with water. Flammable, irritating vapor is produced.
Keep people away. Shut off ignition sources and call fire department. Stay upwind and use water spray to "knock down" vapor. Avoid contact with liquid and vapor. Notify local health and pollution control agencies.	
<b>Fire</b>	FLAMMABLE. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Extinguish with dry chemical, alcohol foam, or carbon dioxide. Water may be ineffective on fire. Cool exposed containers with water.
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR Irritating to eyes, nose and throat. If inhaled, will cause nausea, vomiting, headache, dizziness, difficult breathing, or loss of consciousness. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Will burn eyes. Harmful if swallowed. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk.
<b>Water Pollution</b>	Dangerous to aquatic life in high concentrations. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> MMH Monomethylhydrazine	Liquid  Colorless  Ammonia-like odor  Mixes with water. Poisonous, flammable vapor is produced.
Evacuate. <b>KEEP PEOPLE AWAY. AVOID CONTACT WITH LIQUID AND VAPOR.</b> Wear goggles and self-contained breathing apparatus. Shut off ignition sources. Call fire department. Stay upwind. Use water spray to "knock down" vapor. Notify local health and pollution control agencies.	
<b>Fire</b>	FLAMMABLE. Containers may explode in fire. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. May explode if exposed to heat or flames. Extinguish with dry chemicals, alcohol foam, or carbon dioxide. Water may be ineffective on fire. Cool exposed containers with water.
<b>Exposure</b>	Call for medical aid.  VAPOR POISONOUS IF INHALED OR IF SKIN IS EXPOSED. Irritating to eyes, nose and throat. Move victim to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID POISONOUS IF SWALLOWED OR IF SKIN IS EXPOSED. Will burn skin and eyes. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk. DO NOT INDUCE VOMITING.
<b>Water Pollution</b>	Effect of low concentrations on aquatic life is unknown. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

INHALATION: move victim to fresh air and keep him quiet; give artificial respiration if breathing stops. EYES: flush for at least 15 min. with large quantities of water. SKIN: immediately wash with large quantities of water and treat as for alkali burn. INGESTION: give egg whites or other emollient, followed by a 5% salt solution or other mild emetic. Keep patient as quiet as possible. To control convulsions, short-acting barbituates may be administered parenterally by a physician with due regard for depression of respiration.

### 3. HEALTH HAZARDS

- 3.1 **Personal Protective Equipment:** Dust mask; goggles or face shield; protective gloves
- 3.2 **Symptoms Following Exposure:** All forms of exposure to this compound are hazardous. Acute systemic mercurialism may be fatal within a few minutes; death by uremic poisoning is usually delayed 5-12 days. Acute poisoning has resulted from inhaling dust concentrations of 1.2-8.5 mg/m<sup>3</sup> of air; symptoms include tightness and pain in chest, coughing, and difficulty in breathing. Ingestion causes necrosis, pain, vomiting, and severe purging. Contact with eyes causes ulceration of conjunctiva and cornea. Contact with skin causes irritation and possible dermatitis; systemic poisoning can occur by absorption through skin.
- 3.3 **Treatment of Exposure:** INHALATION: remove to fresh air; get medical attention. INGESTION: alimentary absorption is very rapid; action during first 10-15 min. determines prognosis. Give egg whites, milk, or activated charcoal and induce vomiting; consult physician. EYES: flush with water for at least 15 min. SKIN: flush with water; wash with soap and water.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> Isocyanatomethane Isocyanic acid, methyl ester Methane, isocyanato- Methyl carbonimide MIC	Liquid  Colorless  Sharp, unpleasant odor
Floats; slowly mixes and slowly reacts with water at 20°C.	
<b>KEEP PEOPLE AWAY. AVOID CONTACT WITH LIQUID AND VAPOR. EVACUATE AREA.</b> Wear chemical protective suit with self-contained breathing apparatus. Shut off ignition sources and call fire department. Stay upwind and use water spray to "knock down" vapor. Notify local health and pollution control agencies.	
<b>Fire</b>	FLAMMABLE. POISONOUS GASES/VAPORS ARE PRODUCED IN FIRE. Containers may explode in fire. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. WEAR CHEMICAL PROTECTIVE SUIT WITH SELF-CONTAINED BREATHING APPARATUS. Extinguish small fires: dry chemical, CO <sub>2</sub> , water spray or foam; large fires: water spray, fog or foam. Combat fires from safe distance or protected location. Cool exposed containers with water.
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR POISONOUS IF INHALED OR IF SKIN EXPOSED. May cause fatal pulmonary edema. Respiratory distress cited for most deaths. Severely irritating to eyes. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen. Liquid POISONOUS IF SWALLOWED OR IF SKIN EXPOSED. Causes eye injury and skin burns. Remove contaminated clothing and shoes. Flush affected areas with plenty of running water for at least 15 minutes. IF IN EYES, hold eyelids open and flush with plenty of running water. IF SWALLOWED and victim is CONSCIOUS, have victim drink a large quantity of water and induce vomiting. IF SWALLOWED and victim is UNCONSCIOUS OR HAVING CONVULSIONS, do nothing except keep victim warm.
<b>Water Pollution</b>	Effect of low concentrations on aquatic life is unknown. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

<b>3. HEALTH HAZARDS</b> 3.1 <b>Personal Protective Equipment:</b> Positive pressure breathing apparatus and special protective clothing. 3.2 <b>Symptoms Following Exposure:</b> Poisonous; may be fatal if inhaled. Experimental exposure of four human subjects for 1 to 5 minutes to: 0.4 ppm - no effects; 2 ppm - irritation of nose and throat; 4 ppm - irritation more marked; 21 ppm - unbearable irritation of nose and throat. High concentrations can cause burning sensations in the nose and throat, coughing, dyspnea (difficult or painful breathing, gasping for breath), increased secretions, lung injury and subsequent pulmonary edema and uncontrollable vomiting. Most deaths (Bhopal, India, 1984) have been attributed to various forms of respiratory distress such as massive accumulation of fluid in the lungs or spasmodic contractions of the bronchial tubes. 3.3 <b>Treatment of Exposure:</b> INHALATION: Move victim to fresh air; call emergency medical care. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Remove and isolate contaminated clothing and shoea at the site. EYES AND SKIN: Immediately flush eyes or skin with running water for at least 15 minutes, hold eyelids open occasionally, if appropriate. INGESTION: IF CONSCIOUS, give victim large quantities of water and induce vomiting by having victim touch the back of his throat. IF UNCONSCIOUS, do nothing except keep victim quiet and maintain normal body temperature. - 4.4 **Fire Extinguishing Agents Not to Be Used:** Not pertinent
- 4.5 **Special Hazards of Combustion Products:** Contain toxic and irritating gases, including HCN and NOx.
- 4.6 **Behavior in Fire:** Very flammable; may be ignited by heat, sparks or flames. May travel to a source of ignition and flashback. Container may explode violently.
- 4.7 **Auto Ignition Temperature:** 995°F.

## 5. CHEMICAL REACTIVITY

- 5.1 **Reactivity with Water:** Reacts slowly with water at room temperature (20°C) to produce gaseous CO<sub>2</sub>, methylamine (b.p. -6°C), and heat (about 585 Btu per lb of methyl isocyanate or about 3,700 Btu per lb of water). Resulting pressure increase may cause relief valves to open. Acids, alkalies and amides accelerate the reaction. Reactivity accelerates as temperature rises.
- 5.2 **Reactivity with Common Materials:** Avoid contact with all metals other than stainless steel and nickel. The metals may catalyze polymerization reactions. The heat of reaction can cause the trimerization to occur with explosive violence. Also attacks some plastics, rubber and coatings. Glass-lined containers (no pinholes) and fluorocarbon resin-lined transfer hoses are acceptable.
- 5.3 **Stability During Transport:** Drums may be stored at ambient temperatures out of direct sun. Keep as cool as practical and away from sources of heat, sparks, or flames. Protected from all contaminants. Cool bulk quantities to about 0°C.
- 5.4 **Neutralizing Agents for Acids and Caustics:** Caustic soda
- 5.5 **Polymerization:** Pure methyl isocyanate polymerizes spontaneously. Commercial product requires only heat or a trace of catalyst to initiate a potentially violent reaction.
- 5.6 **Inhibitor of Polymerization:** No inhibitor identified as such. Residual trace phosgene from production inhibits polymerization and reaction with water.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> alpha-Methylnaphthalene	Liquid (oil)      Colorless  Sinks slowly in water. Freezing point is 25.6°F.
Keep people away. Shut off ignition sources. Call fire department. Wear self-contained positive pressure breathing apparatus and full protective clothing. Avoid contact with liquid and vapor. Notify local health and pollution control agencies.	
<b>Fire</b>	Combustible. Wear self-contained positive pressure breathing apparatus and full protective clothing. Extinguish with water, dry chemical, foam or carbon dioxide.
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR Harmful if inhaled. May irritate the eyes and skin and photosensitize the skin. Move victim to fresh air. If in eyes, hold eyelids open and flush with running water. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Harmful if swallowed. May irritate the eyes and skin and photosensitize the skin. IF IN EYES OR ON SKIN: immediately flush with running water for at least 15 minutes; hold eyelids open if appropriate. Remove and isolate contaminated clothing and shoes at the site. IF SWALLOWED and victim is CONSCIOUS, have victim drink large volumes of warm water and induce vomiting. IF SWALLOWED and the victim is UNCONSCIOUS OR HAVING CONVULSIONS, do nothing except keep victim warm.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> alpha-Methylpyridine Picoline 2-Picoline alpha-Picoline	Liquid  Colorless  Strong, unpleasant  Floats on water. Poisonous, flammable vapor is produced.
<b>Keep people away. AVOID CONTACT WITH LIQUID AND VAPOR.</b> Wear goggles, self-contained breathing apparatus, and rubber overclothing (including gloves). Shut off ignition sources and call fire department. Stay upwind and use water spray to "knock down" vapor. Notify local health and pollution control agencies.	
<b>Fire</b>	FLAMMABLE. Poisonous gases are produced when heated. Flashback along vapor trail may occur. Wear goggles and self-contained breathing apparatus. Extinguish with dry chemical, alcohol foam, or carbon dioxide. Water may be ineffective on fire. Cool exposed containers with water.
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR Harmful if inhaled or if skin is exposed. Irritating to eyes, nose, and throat. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Harmful if swallowed or if skin is exposed. Will burn eyes. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED, and victim is UNCONSCIOUS, have victim drink water or milk and have victim induce vomiting. IF SWALLOWED and victim in UNCONSCIOUS OR HAVING CONVULSIONS, do nothing except keep victim warm.
<b>Water Pollution</b>	Effect of low concentrations on aquatic life is unknown. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> Calochlor Corrosive mercury chloride Mercury bichloride Mercury (II) chloride Mercury perchloride	Solid  White   Sinks and mixes slowly with water.
<b>KEEP PEOPLE AWAY. AVOID CONTACT WITH SOLID AND DUST.</b> Wear a dust respirator and rubber overclothing (including gloves). Notify local health and pollution control agencies.	
<b>Fire</b>	Not flammable. POISONOUS GASES MAY BE PRODUCED WHEN HEATED.
<b>Exposure</b>	CALL FOR MEDICAL AID. DUST POISONOUS IF INHALED OR IF SKIN IS EXPOSED. If inhaled will cause coughing or difficult breathing. If in eyes, hold eyelids open and flush with plenty of water. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  SOLID POISONOUS IF SWALLOWED OR IF SKIN IS EXPOSED. Irritating to skin and eyes. If swallowed will cause nausea and vomiting. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk and have victim induce vomiting. IF SWALLOWED and victim is UNCONSCIOUS OR HAVING CONVULSIONS, do nothing except keep victim warm.

### 3. HEALTH HAZARDS

- 3.1 **Personal Protective Equipment:** Bu. Mines approved airline respirator; impervious suit; appropriate eye protection
- 3.2 **Symptoms Following Exposure:** All forms of exposure to this compound are hazardous; acute systemic mercurialism may be fatal within a few minutes, but death by uremic poisoning is usually delayed 5-12 days. Acute poisoning has resulted from inhaling dust concentrations of 1.2-8.5 mg/m<sup>3</sup> of air; symptoms include tightness and pain in chest, coughing, and difficulty in breathing. Ingestion causes necrosis, pain, vomiting, and severe purging; as little as 0.5 gm can be fatal. Contact with eyes causes ulceration of conjunctiva and cornea. Contact with skin causes irritation and possible dermatitis; systemic poisoning can occur by absorption through skin.
- 3.3 **Treatment of Exposure:** Act promptly] Alimentary absorption is very rapid, and the first 10-15 minutes determine the prognosis. INHALATION: remove victim to fresh air; get medical attention. INGESTION: give egg whites, milk, or activated charcoal; induce vomiting; consult physician. EYES or SKIN: wash with water for 15 min.

<b>KEEP PEOPLE AWAY. AVOID CONTACT WITH SOLID AND DUST.</b> Wear dust respirator. Notify local health and pollution control agencies.	
<b>Fire</b>	Not flammable. POISONOUS GASES MAY BE PRODUCED WHEN HEATED.
<b>Exposure</b>	CALL FOR MEDICAL AID. DUST POISONOUS IF INHALED. If inhaled will cause coughing or difficult breathing. If in eyes, hold eyelids open and flush with plenty of water. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  SOLID POISONOUS IF SWALLOWED. Irritating to skin and eyes. If swallowed will cause nausea and vomiting. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk and have victim induce vomiting. IF SWALLOWED and victim is UNCONSCIOUS OR HAVING CONVULSIONS, do nothing except keep victim warm.
<b>Water Pollution</b>	Effect of low concentrations on aquatic life is unknown. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> Isopropylideneacetone Methyl isobuteryl ketone 4-Methyl-3-pentene-2-one	Liquid  Colorless to light yellow  Strong peppermint or honey odor  Floats and mixes with water. Flammable, irritating vapor is produced.
Keep people away. Shut off ignition sources, call fire department. Stay upwind, use water spray to "knock down" vapor. Notify local health and pollution control agencies.	
<b>Fire</b>	FLAMMABLE. Containers may explode in fire. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Extinguish with dry chemicals, alcohol foam, or carbon dioxide. Water may be ineffective on fire. Cool exposed containers with water.
<b>Exposure</b>	Call for medical aid.  VAPOR Irritating to eyes, nose and throat. If inhaled will cause headache, dizziness or difficult breathing. Move victim to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Irritating to skin and eyes. Harmful if swallowed. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk.
<b>Water Pollution</b>	Effect of low concentrations on aquatic life is unknown. Fouling to shoreline. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

# METHYL CHLORIDE

MTC

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> Artic Chloromethane	Gas  Colorless  Odorless or sweet odor  Floats and boils on water. Flammable, visible vapor cloud is formed.
Evacuate. Keep people away. Avoid contact with liquid and vapor. Wear goggles and self-contained breathing apparatus. Shut off ignition sources and call fire department. Stay upwind and use water spray to "knock down" vapor. Notify local health and pollution control agencies.	
<b>Fire</b>	FLAMMABLE. POISONOUS GASES ARE PRODUCED IN FIRE. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Wear goggles and self-contained breathing apparatus. Stop discharge if possible. Cool exposed containers and protect men effecting shutoff with water. Let fire burn.
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR Not irritating to eyes, nose or throat. If inhaled, will cause nausea, vomiting, headache, difficult breathing, or loss of consciousness. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Will cause frostbite. Flush affected areas with plenty of water. DO NOT RUB AFFECTED AREAS.
<b>Water Pollution</b>	Not harmful to aquatic life.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> Dimethoxymethane Dimethyl formal Formaldehyde dimethylacetol Methylal Methylene dimethyl ether	Liquid  Colorless  Mild sweet odor  Mixes with water. Flammable, irritating vapor is produced.
Keep people away. Shut off ignition sources. Call fire department. Notify local health and pollution control agencies.	
<b>Fire</b>	FLAMMABLE. Irritating gases may be produced when heated. Containers may explode in fire. Flashback along vapor trail may occur. Vapor may explode if ignited in an enclosed area. Extinguish with dry chemicals, foam or carbon dioxide. Water may be ineffective on fire. Cool exposed containers with water.
<b>Exposure</b>	Call for medical aid.  VAPOR Irritating to eyes, nose and throat. Harmful if inhaled. Move victim to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Irritating to skin and eyes. Harmful if swallowed. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, having victim drink water or milk and have victim induce vomiting. IF SWALLOWED and victim is UNCONSCIOUS OR HAVING CONVULSIONS, do nothing except keep victim warm.
<b>Water Pollution</b>	Effect of low concentrations on aquatic life is unknown. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> Marsh gas Natural gas	Gas Colorless Weak odor  Liquid floats and boils on water. Flammable visible vapor cloud is produced.
<b>Keep people away.</b> Avoid inhalation. Shut off ignition sources and call fire department. Stay upwind and use water spray to "knock down" vapor. Evacuate area in case of large discharge. Avoid contact with liquid and vapor. Notify local health and pollution control agencies.	
<b>Fire</b>	FLAMMABLE. Flashback along vapor trail may occur. May explode if ignited in an enclosed area. Stop discharge if possible. Cool exposed containers and protect men effecting shutoff with water. Let fire burn.
<b>Exposure</b>	CALL FOR MEDICAL AID.  VAPOR Not irritating to eyes, nose or throat. If inhaled, will cause dizziness, difficult breathing, and loss of consciousness. Move to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult, give oxygen.  LIQUID Will cause frostbite. Flush affected areas with plenty of water. DO NOT RUB AFFECTED AREAS.

## CAUTIONARY RESPONSE INFORMATION

<b>Common Synonyms</b> 1-Aminonaphthalene alpha-Naphthylamine	Solid  Light to dark brown  Weak ammonia-like odor  Sinks in water.
<b>KEEP PEOPLE AWAY. AVOID CONTACT WITH SOLID AND DUST.</b> Avoid inhalation. Wear dust respirator and rubber overclothing (including gloves). Notify local health and pollution control agencies. Protect water intakes.	
<b>Fire</b>	Combustible. POISONOUS GASES ARE PRODUCED IN FIRE. Irritating gases are produced when heated. Extinguish with water, dry chemicals, foam, or carbon dioxide.
<b>Exposure</b>	CALL FOR MEDICAL AID. DUST POISONOUS IF INHALED OR IF SKIN IS EXPOSED. Irritating to eyes. Move victim to fresh air. If in eyes, hold eyelids open and flush with plenty of water. If breathing is difficult, give oxygen.  SOLID POISONOUS IF SWALLOWED OR IF SKIN IS EXPOSED. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. IF IN EYES, hold eyelids open and flush with plenty of water. IF SWALLOWED and victim is CONSCIOUS, have victim drink water or milk and have victim induce vomiting. IF SWALLOWED and victim is UNCONSCIOUS OR HAVING CONVULSIONS, do nothing except keep victim warm.
<b>Water Pollution</b>	Effect of low concentrations on aquatic life is unknown. May be dangerous if it enters water intakes. Notify local health and wildlife officials. Notify operators of nearby water intakes.
